S/M No.: OC154K8001

Service Manual

Microwave Oven

Model: KOC-154K8S

✓ Caution

: In this Manual, some parts can be changed for improving, their performance without notice in the parts list. So, if you need the latest parts information, please refer to PPL(Parts Price List) in Service Information Center

Oct. 2006

PRECAUTIONS TO BE OBSERVED BEFORE AND DURING SERVICING TO AVOID POSSIBLE EXPOSURE TO EXCESSIVE MICROWAVE ENERGY

- (a) Do not operate or allow the oven to be operated with the door open.
- (b) Make the following safety checks on all ovens to be serviced before activating the magnetron or other microwave source, and make repairs as necessary: (1) Interlock operation, (2) Proper door closing, (3) Seal and sealing surfaces (arcing, wear, and other damage), (4) Damage to or loosening of hinges and latches, (5) Evidence of dropping or abuse.
- (c) Before turning on power to the microwave oven for any service test or inspection within the microwave generating compartments, check the magnetron, wave guide or transmission line, and cavity for proper alignment, integrity, and connections.
- (d) Any defective or misadjusted components in the interlock, monitor, door seal, and microwave generation and transmission systems shall be repaired, replaced, or adjusted by procedures described in this manual before the oven is released to the owner.

A microwave leakage check to verify compliance with the Federal performance standard should be performed on each oven prior to release to the owner.

1. SAFETY AND PRECAUTIONS

1. FOR SAFE OPERATION

Damage that allows the microwave energy (that cooks or heats the food) to escape will result in poor cooking and may cause serious bodily injury to the operator.

IF ANY OF THE FOLLOWING CONDITIONS EXIST, OPERATOR MUST NOT USE THE APPLIANCE. (Only a trained service personnel should make repairs.)

- 1) A broken door hinge.
- 2) A broken door viewing screen.
- 3) A broken front panel, oven cavity.
- 4) A loosened door lock.
- 5) A broken door lock.

The door gasket plate and oven cavity surface should be kept clean.

No grease, soil or spatter should be allowed to build up on these surfaces or inside the oven.

DO NOT ATTEMPT TO OPERATE THIS APPLIANCE WITH THE DOOR OPEN.

The microwave oven has concealed switches to make sure the power is turned off when the door is opened.

Do not attempt to defeat them.

DO NOT ATTEMPT TO SERVICE THIS APPLIANCE UNTIL YOU HAVE READ THIS SERVICE MANUAL.

2. FOR SAFE SERVICE PROCEDURES.

- 1. If the oven is operative prior to servicing, a microwave emission check should be performed prior to servicing the oven.
- 2. If any certified oven unit is found to servicing, a microwave emission check should be performed prior to servicing the oven.
 - (a) inform the manufacturer, importer or assembler,
 - (b) repair the unit at no cost to the owner,
 - (c) attempt to ascertain the cause of the excessive leakage,
 - (d) tell the owner of the unit not to use the unit until the oven has been brought into compliance.
- 3. If the oven operates with the door open, the service person should tell the user not to operate the oven and contact the manufacturer immediately.

IMPORTANT

The wire in this mains lead coloured in accordance with the following code.

Green-and-yellow: Earth
Blue: Neutral
Brown: Live

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows.

The wire which is coloured green-and-yellow must be connected to the terminal in the plug which is marked with the letter 'E' or by earth symbol or green-and-yellow.

The wire which is coloured blue must be connected to the terminal which is marked with the letter 'N' or coloured black.

The wire which is coloured brown must be connected to the terminal which is marked with the letter 'L' or coloured red.

NOTE: This oven is designed for counter-top use only.

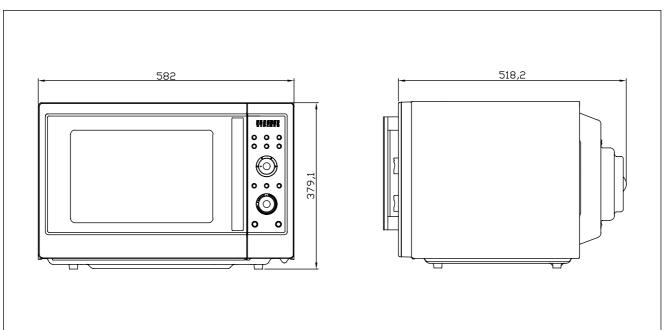

2. SPECIFICATIONS

MODEL		KOC-154K8S	
POWER SUPPLY		230V~50Hz, SINGLE PHASE WITH EARTHING	
	MICROWAVE	1550W	
POWER	GRILL	1550W	
CONSUMPTION	CONVECTION	2550W	
	COMBINATION	2950W	
MICROWAVE ENER	GY OUTPUT	950W(IEC705)	
MICROWAVE FREQ	UENCY	2450MHz	
OUTSIDE DIMENSIC	ONS (W X H X D)	582X379.1X518.2mm (22.9x14.9x20.4 in.)	
CAVITY DIMENSION	IS (W X H X D)	390X285.5X383mm (15.4x11.2x15.1 in.)	
NET WEIGHT		APPROX. 23.1kg (50.9 lbs.)	
TIMER		60 minutes	
FUNCTION SELECTIONS		MICROWAVE/ GRILL/ CONVECTION/ COMBINATION	
POWER SELECTION	NS .	10 LEVELS	
CAVITY VOLUME		1.5 Cu. Ft	

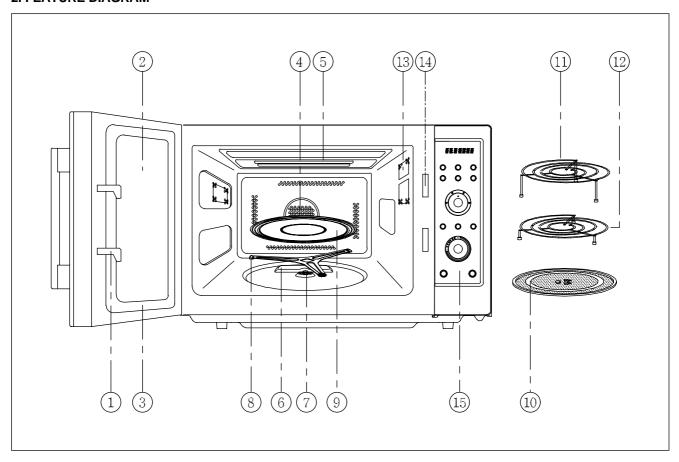

^{*} Specifications are subject to change without notice.

3. EXTERNAL VIEW

1. OUTER DIMENSION

2. FEATURE DIAGRAM

1. DOOR HOOK

When the door is closed, it will automatically lock shut. If door is opened while oven is operating, the magnetron will immediately stop operating.

2. DOOR VIEWING SCREEN

Allows viewing of food. The screen is designed so that light can pass through, but not the microwave.

3. DOOR SEAL

Door seal maintains the microwave energy within the oven cavity and prevents microwave leakage.

4. CONVECTION OUTLET & FAN

5. TOP HEATER

Turns on when convection, grill and combi cooking is selected.

6. UNDER HEATER

7. COUPLER

This fits over the shaft in the center of the ovens cavity floor. This is to remain in the oven for all cooking.

8. ROLLER GUIDE

This must always be used for cooking together with the turntable tray.

9. METAL TURNTABLE TRAY

This is to be used for convection, combination and grill cooking. It rotates during cooking.

10. GLASS TURNTABLE TRAY

This is to be used for microwave cooking. It rotates during cooking.

11. METAL RACK (High)

12. METAL RACK (Low)

13. OVEN LAMP

Automatically turns on during oven operating.

14. SAFETY INTERLOCK SYSTEM

15. CONTROL PANEL

4. INSTALLATION

1. Steady, flat location

This microwave oven should be set on a steady, flat surface.

This microwave oven is designed for counter top use only.

2. Leave space behind and side

All air vents should be kept a clearance. If all vents are covered during operation, the oven may overheat and, eventually, cause failure.

3. Away from Radio and TV sets

Poor television reception and radio interference may result if the oven is located close to a TV, Radio, antenna or feeder and so on.

Position the oven as far from them as possible.

4. Away from heating appliances and water taps

Keep the oven away from hot air, steam or splash when choosing a place to position it, or the insulation might be adversely affected and breakdowns occur.

5. Power supply

- Check your local power source. This microwave oven requires a current of approximately 13(8) amperes, 230V, 50Hz.
- Power supply cord is about 1.2 meters long.
- The voltage used must be the same as specified on this oven. Using a higher voltage may result in a fire or other accident causing oven damage. Using low voltage will cause slow cooking. We are not responsible for damage resulting from use of this oven with a voltage of ampere fuse other than those specified.
- This appliance is supplied with cable of special type, which, if damaged, must be repaired with cable of same type. Such a cable can be purchased from DAEWOO and must be installed by a Qualified Person.

6. Examine the oven after unpacking for any damage such as:

A misaligned door, broken door or a dent in cavity.

If any of the above are visible, DO NOT INSTALL, and notify dealer immediately.

7. Do not operate the oven if it is colder than room temperature.

(This may occur during delivery in cold weather.) Allow the oven to become room temperature before operating.

EARTHING INSTRUCTIONS

This appliance must be earthed. In the event of an electrical short circuit, earthing reduces the risk of the electric shock by providing an escape wire for the electric current. This appliance is equipped with a cord having a earthing wire with a earthing plug. The plug must be plugged into an outlet that is properly installed and earthed.

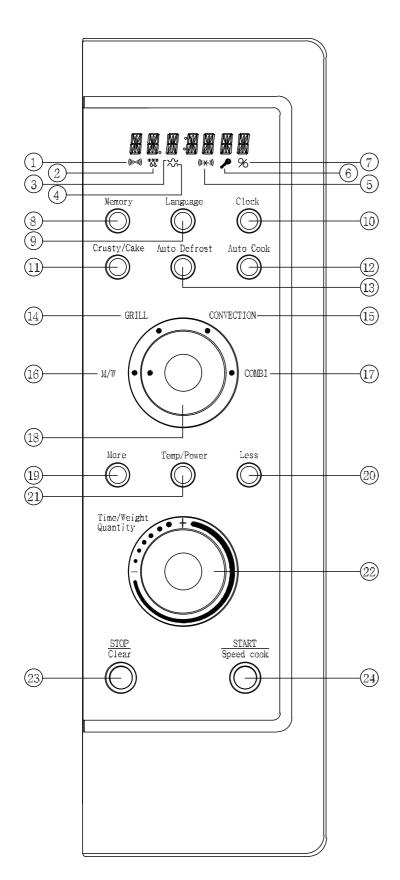

WARNING

Improper use of the earthing plug can result in a risk of electric shock. Consult

a qualified electrician or serviceman if the earthing instructions are not completely understood, or if doubt exists as to whether the appliance is properly earthed, and either:

If it is necessary to use an extension cord, use only a 3-wire extension cord that has a 3-blade earthing plug, and a 3-slot receptacle that will accept the plug on the appliance.

The marked rating of the extension cord should be equal to or greater than the electrical rating of the appliance, or Do not use an extension cord.

DISPLAY WINDOW

- MICROWAVE indicator, showing microwaving in progress.
- **2. DEFROST** indicator, showing defrosting in progress.
- **3. GRILL(upper grill heater)** indicator, showing griling in progress.
- **4. GRILL(lower grill heater)** indicator, showing griling in progress.
- **5. CONVECTION** indicator, showing convectioning in progress.
- 6. CHILD LOCK indicator.
- **7.** % percentage microwave power level indicator.

BUTTONS

- **8. memory** Use to set favorite cooking mode.
- 9. language Press to select the language.
- 10. clock Use to set clock.
- **11. crusty/cake** Press to select crusty/cake menu.
- **12. auto cook** Press to select auto cook menu.
- auto defrost Press to select defrost menu.
- 14. grill Use to select grill.
- **15. convection** Use to select convection.
- **16.** m/w Use to select microwave.
- 17. combi Use to select combi.
- 18. Menu Knob Use to select menus.
- 19. more Use to add time to cooking.
- 20. less Use to reduce cooking time.
- **21. Power/Temp/Mode** Use to set power, temperature and grill/combi mode.
- **22. dial knob** Use to set time, weight and quantity.
- **23. stop/clear** Press once to stop a programme, and twice to cancel a programme.
- **24. start/speedy cook** Press to start a programme, also for speedy start (each press adds 30 seconds to microwave cooking time).

6. DISASSEMBLY AND ASSEMBLY

- Cautions to be observed when trouble shooting.

Unlike many other appliances, the microwave oven is high-voltage, high-current equipment.

It is completely safe during normal operation. However, carelessness in servicing the oven can result in an electric shock or possible danger from a short circuit.

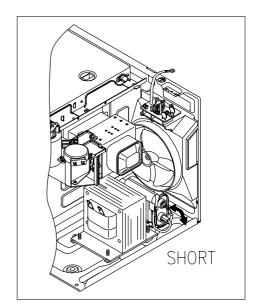

You are asked to observe the following precautions carefully.

- 1. Always remove the power plug from the outlet before servicing.
- 2. Use an insulated screwdriver and ware rubber gloves when servicing the high voltage side.
- 3. Discharge the high voltage capacitor before touching any oven components or wiring.
 - (1) Check the earthed.

Do not operate on a two-wire extension cord.

The microwave oven is designed to be used with earthed. It is imperative, therefore, to makes sure it is earthed properly before beginning repair work.

- (2) Warning about the electric charge in the high voltage capacitor. For about 30 seconds after the operation stopped and electric charge remains in the high voltage capacitor. When replacing or checking parts, short between oven chassis and the negative high terminal of the high voltage capacitor, by using a properly insulated screwdriver to discharge.
- 4. When the 15A fuse is blown out due to the operation of the monitor switch; replace primary interlock switch, secondary interlock switch and interlock monitor switch.
- 5. After repair or replacement of parts, make sure that the screws are properly tightened, and all electrical connections are tightened.
- 6. Do not operate without cabinet.

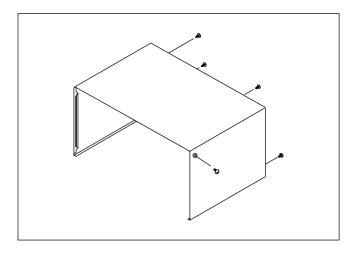

CAUTION: Service personnel should remove their watches whenever working close to or replacing the magnetron.

WARNING: When servicing the appliance, need a care of touching or replacing high potential parts because of electrical shock or exposing microwave. These parts are as follows - HV Transformer, Magnetron, HV Capacitor, HV Diode.

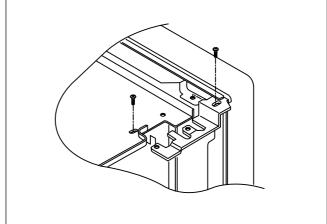

1. To remove cabinet

- 1) Remove 5 screws on the cabinet back and side.
- 2) Push the cabinet backward.

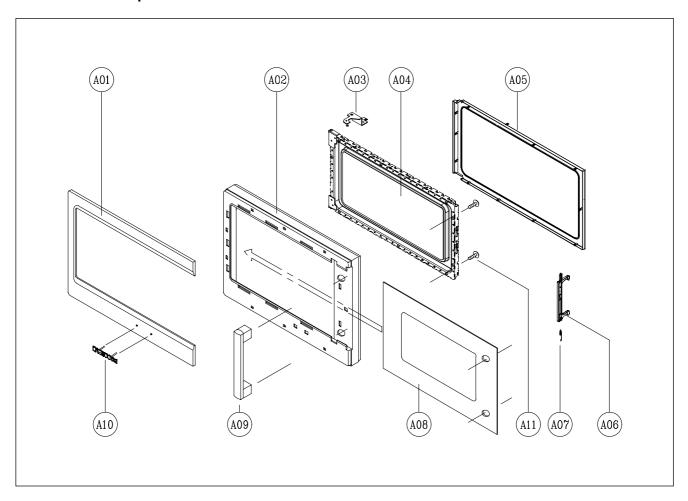

2. To remove door assembly

- 1) Remove two screws which secure the stopper hinge top.
- 2) Remove the door assembly from top plate of cavity.
- 3) Reverse the above for reassembly.

NOTE: After replacing the door assembly, perform a check of correct alignment with the hinge and cavity front plate.

3. To remove door parts.

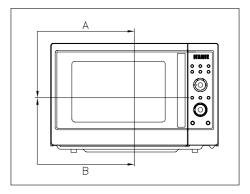

NO	PARTS CODE	PARTS NAME	DESCRIPTION	Q'TY	REMARK
A01	3511617200	DECORATOR DOOR	STS TO.5 #4	1	
A02	3512210300	FRAME DOOR	PC	1	
A03	3515204900	STOPPER HINGE *T AS	KOC-1B0K0S	1	
A04	3511714110	DOOR SEAL AS	KOC-154K8S	1	
A05	3512302800	GASKET DOOR	PBT	1

A11	7122401211	SCREW TAPPING	T2S TRS 4X12	2	

- (1) Remove the gasket door from door plate.
- (2) Remove two screws from the handle assembly secured to door frame.
- (3) Remove the handle door and barrier screen outer from door frame.
- (4) Remove the door frame from door plate.
- (5) Remove the stopper hinge top from door plate.
- (6) Remove the spring and the hook.
- (7) Reverse the above steps for reassembly.

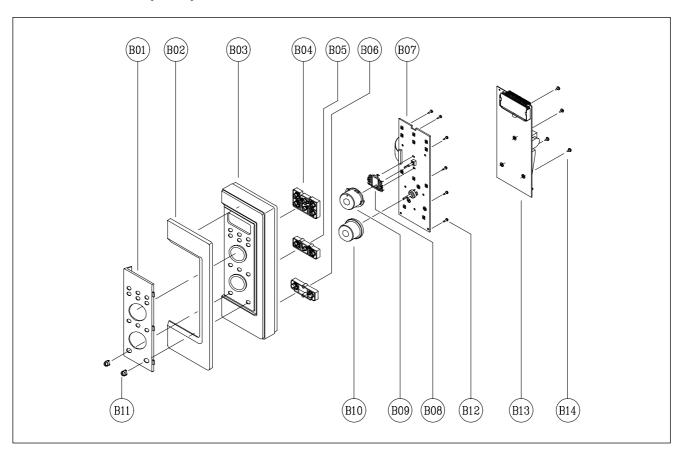

4. Method to reduce the gap between the door seal and the oven front surface.

- (1) To reduce gap located on part 'A'.
 - Loosen two screws on stopper hinge top, and then push the door to contact the door seal to oven front surface.
 - Tighten two screws.
- (2) To reduce gap located on part 'B'.
 - Loosen two screws on stopper hinge under, and then push the door to contact the door seal to oven front surface.
 - Tighten two screws.

NOTE: A small gap may be acceptable if the microwave leakage does not exceed 4mW/cm².

5. To remove control panel parts.

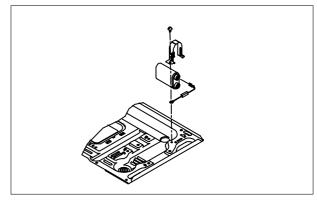

NO	PARTS CODE	PARTS NAME	DESCRIPTION	Q'TY	REMARK
B01	3511617310	DECORATOR C-PANEL	SAN	1	
B02	3511617300	DECORATOR C-PANEL	STS TO.5 #4	1

B13	PKMPMSF210	PCB MAIN MANUAL AS	KOC-154K8S	1	
B14	7122401211	SCREW TAPPING	T2S TRS 4X12	4	

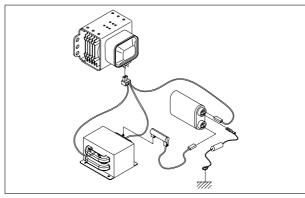

- (1) Remove four screws(B14) which secure the control panel.
- (2) Pull out the main PCB assembly(B13).
- (3) Remove 11 screws(B12) which secure the control panel.
- (4) Pull out the sub PCB assembly(B07).
- (5) Pull out the knob function (B09) and the knob volume(B10) from the sub PCB assembly.
- (6) Pull out the coupler vpc knob (B08) from the sub PCB assembly.
- (7) Pull out three buttons from the control panel.
- (8) Pull out decorator ring(B11) from the control panel.
- (9) Pull out the decorator c-panel (B01) from the control panel.
- (10) Reverse the above steps for reassembly.

6. To remove high voltage capacitor.

- (1) Remove a screw which secure the grounding ring terminal of the H.V.diode and the capacitor holder.
- (2) Remove the H.V. diode from the capacitor holder.
- (3) Reverse the above steps for reassembly.

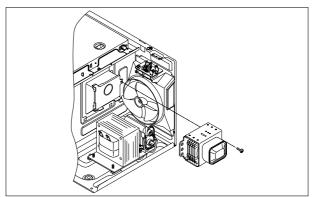

◆ High voltage circuit wiring

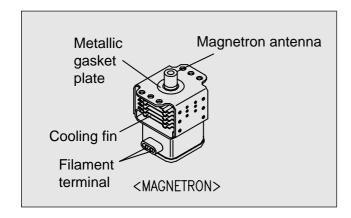

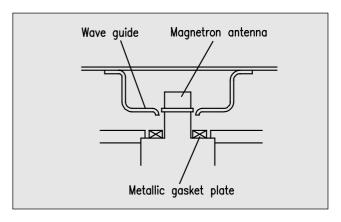

7. To remove magnetron.

- (1) Remove a screw which secure the magnetron.
- (2) Remove the magnetron.
- (3) Reverse the above steps for reassembly.

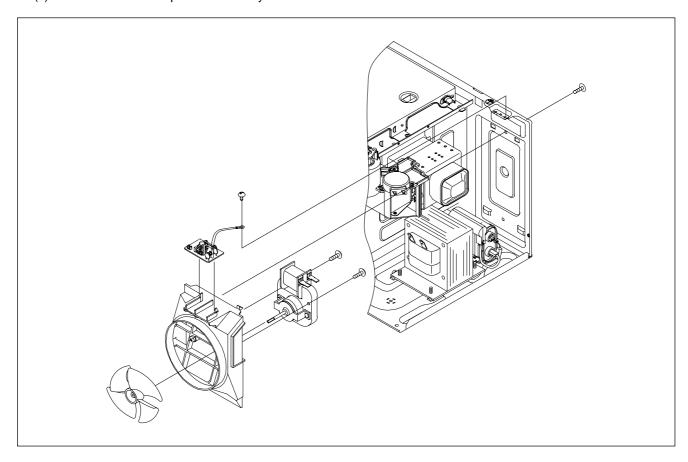

CAUTION: Never install the magnetron without the metallic gasket plate which is packed with each magnetron to prevent microwave leakage. Whenever repair work is carried out on magnetron, check the microwave leakage. It shall not exceed 4mW/cm² for a fully assembled oven with door normally closed.

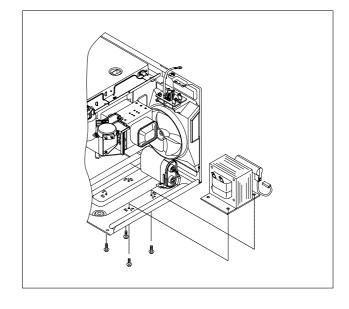

8. To remove wind guide assembly.

- (1) Remove a screw for earthing.
- (2) Remove the noise filter from the wind guide.
- (3) Remove a screw which secure the wind guide assembly.
- (4) Draw forward the wind guide assembly.
- (5) Pull the fan from the motor shaft.
- (6) Remove two screws which secure the motor shaded pole.
- (7) Remove the motor shaded pole.
- (8) Reverse the above steps for reassembly.

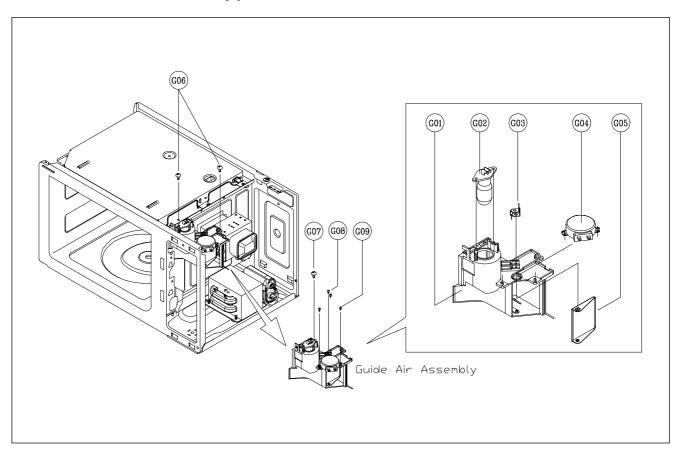

9. To remove H.V.transformer.

- (1) Remove four screws holding the H.V transformer.
- (2) Remove the H.V.transformer.
- (3) Reverse the above steps for reassembly.

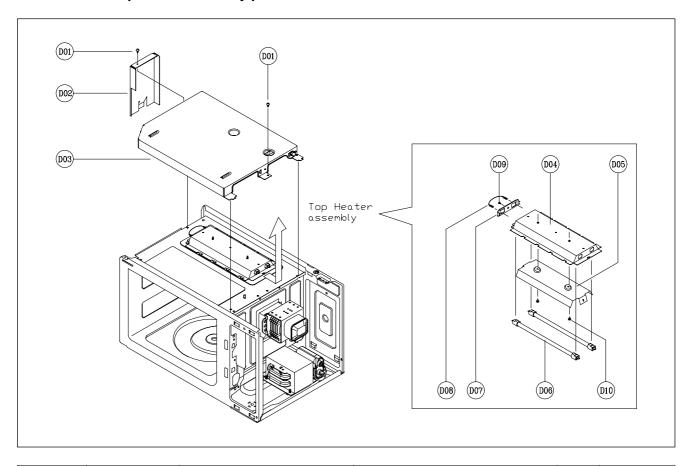

10. To remove Guide air assembly parts.

NO	PARTS CODE	PARTS NAME DESCRIPTION		Q'TY	REMARK
G01	3512525200	GUIDE AIR	PBT	1	
G02	3513601600	LAMP	BL 240V 25W T25 C7A H187	1

G09	7121400611	SCREW TAPPING	T2S PAN 4X6	2	

- 1) Remove two screws (G06) and pull out Guide air assembly.
- 2) Remove a screws (G07) and pull out the lamp.
- 3) Remove two screws (G08) and pull out the two spring terminals.
- 4) Remove two screws (G09).
- 5) Pull out the motor and the bracket damper.
- 6) Reverse the above steps for reassembly.

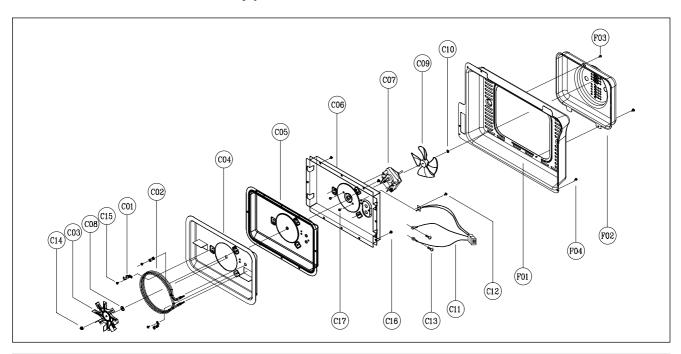

11. To remove Top heater assembly parts.

REF NO.	PART CODE	PART NAME	DESCRIPTION	Q'TY	REMARK
D01	7112401011	SCREW TAPPING	T1 TRS 4X10	2	
D02	3512523600	GUIDE AIR OUTLET	SBHG T0.5	1

E05	7113400814	SCREW TAPPING	T1 BIN 4X8 MFNI	1	

- 1) Cut the Motor syncro. Cover parts from the base plate.
- 2) Remove a screw and then pull out Motor syncro.
- 3) Remove a screw (E05) and then pull out the Under heater *U. assembly.
- 4) Remove a screw (E04).
- 5) Pull out the Heater *U (E01) from the Cover heater *U (E02).
- 6) Reverse the above steps for reassembly.

7. INTERLOCK MECHANISM AND ADJUSTMENT

The door lock mechanism is a device which has been specially designed to completely eliminate microwave radiation when the door is opened during operation, and thus to perfectly prevent the danger resulting from the leakage of microwave.

(1) Primary interlock switch

When the door is closed, the hook locks the oven door. If the door is not closed properly, the oven will not operate.

When the door is closed, the hook pushes the lock lever downward. The lock lever presses the button of the microswitch.

Then the button of the primary interlock switch bring it under "ON" condition.

(2) Secondary interlock switch and interlock monitor switch

When the door is closed, the hook pushes the lock lever downward. The lock lever presses the button of the interlock monitor switch to bring it under "OFF" condition and presses the button of the secondary interlock switch to bring it under "ON" condition.

ADJUSTMENT:

Interlock monitor switch

When the door is closed, the interlock monitor switch should be opened before other switches are closed. When the door is opened, the interlock monitor switch should be closed after other switches are opened.

(3) Adjustment steps

- a) Loosen the one mounting screw.
- b) Adjust interlock switch assembly position.
- c) Make sure that lock lever moves smoothly after adjustment is completed.
- d) Tighten completely one mounting screw.

NOTE

Microwave emission test should be performed after adjusting interlock mechanism. If the microwave emission exceed 4mW/cm², readjust interlock mechanism.

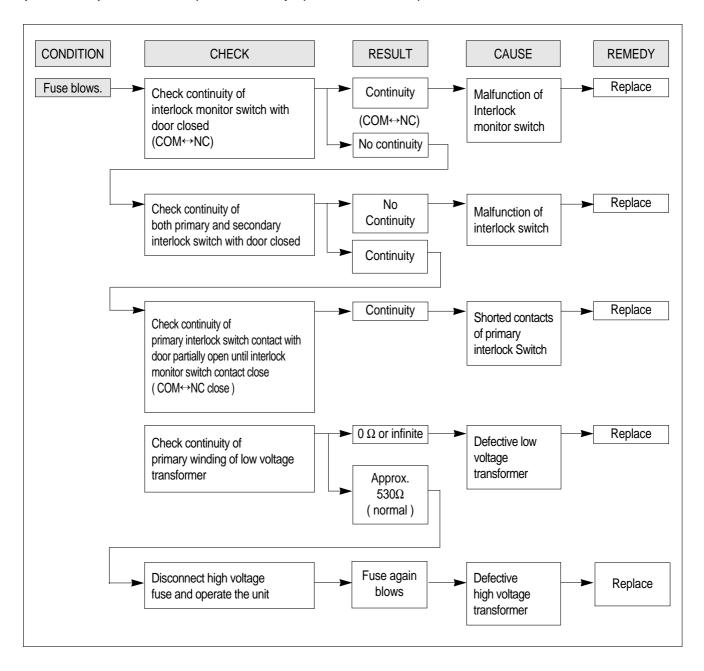

8. TROUBLESHOOTING GUIDE

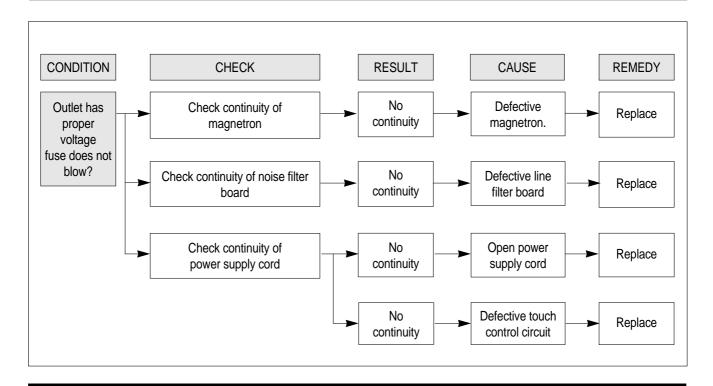

Following the procedure below to check if the oven is defective or not.

- 1) Check grounding before trouble checking.
- 2) Be careful of the high voltage circuit.
- 3) Discharge the high voltage capacitor.
- 4) When checking the continuity of the switches, fuse or high voltage tranformer, disconnect one load wire from these parts and check continuity with the AC plug removed. To do otherwise may result in a false reading or damage to your meter.

NOTE: When electric parts are checked, be sure the power cord is not inserted the wall outlet. Check wire harness, wiring and connection of the terminals and power cord before check the parts listed below.

(TROUBLE 1) Oven does not operate at all: any inputs can not be accepted.

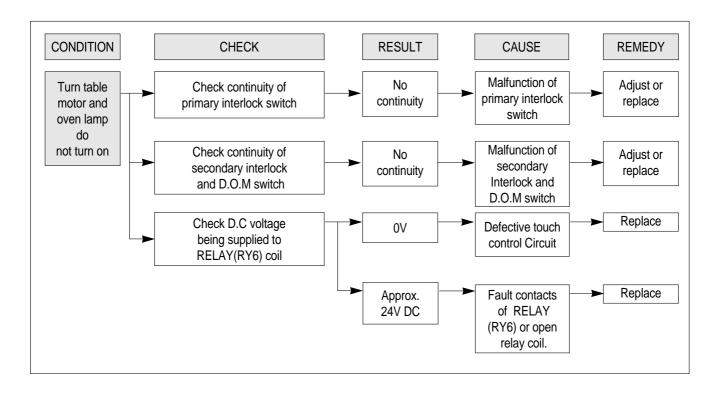

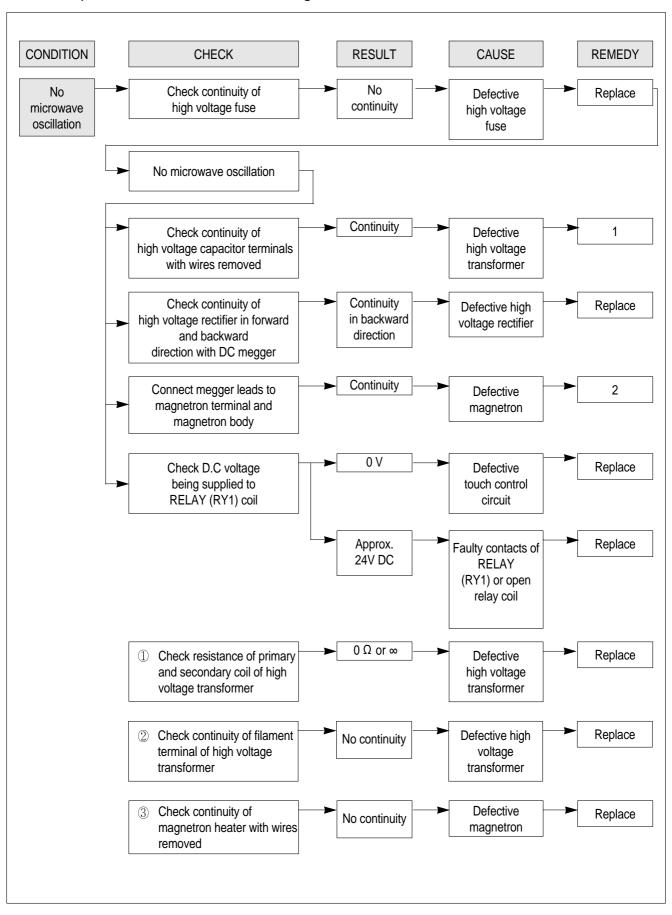

NOTE : All these switches must be replaced at the same time, please refer to (7.Interlock mechanism and adjust) for adjustment instructions

(TROUBLE 2)

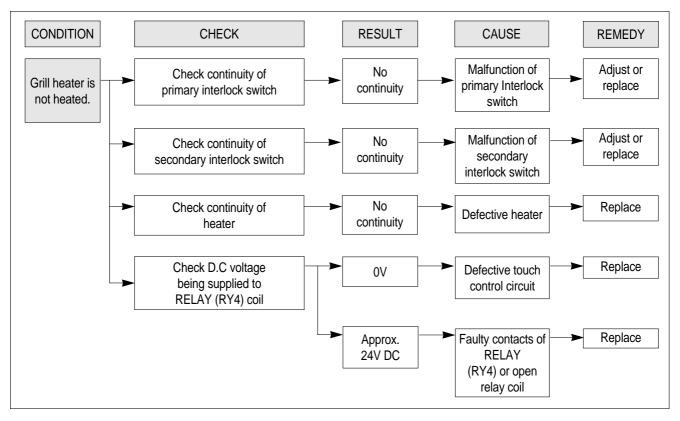

Display shows all figures selected, but oven does not start cooking, even though desired program and time are set and start button is tapped.

TROUBLE 3) No microwave oscillation even though fan motor rotates.

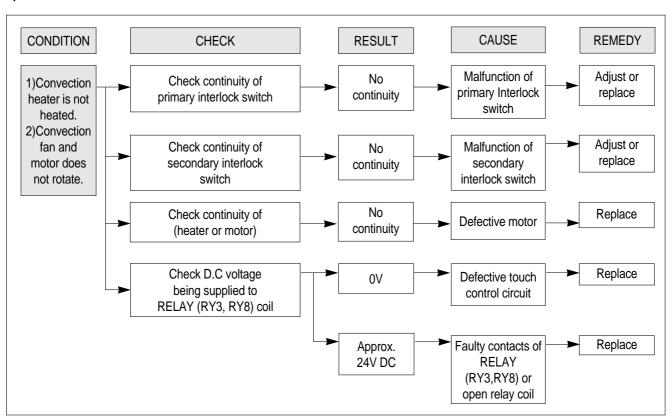

(TROUBLE 4)
Grill heater (upper heater) is not heated; food will not become hot.

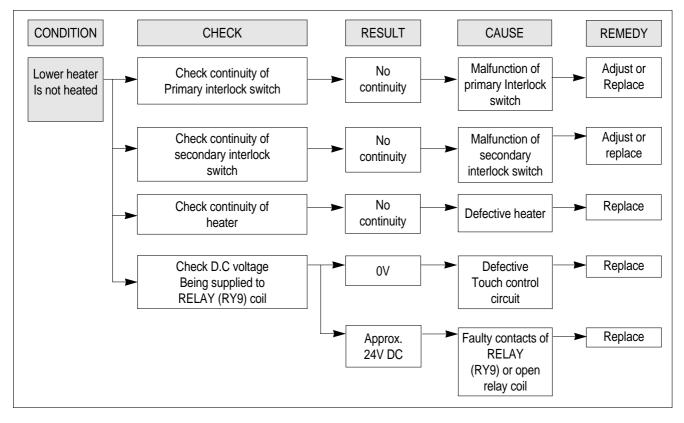

(TROUBLE 5)

- 1) Convection heater is not heated; food will not become hot.
- 2) Convection fan motor does no rotate.

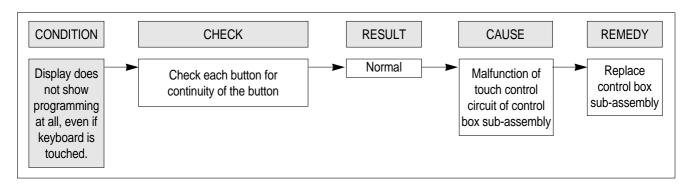

(TROUBLE 6) Lower heater is not heated; food will not become hot.

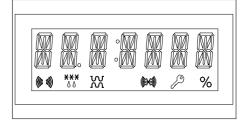

(TROUBLE 7)

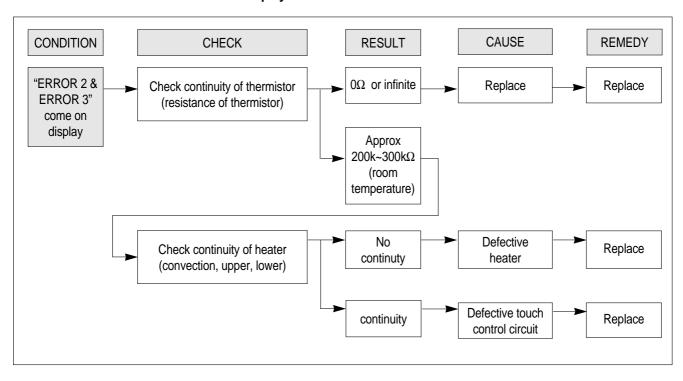

The following visual conditions indicate a probable defective touch control Circuit or button P.C.B. assembly

- 1. Incomplete segments.
 - 1) segment missing
 - 2) partial segments missing
 - 3) digit flickering other than normal fluorescent slight flickering
- 2. A distinct change in the brightness of one or more numbers exists in the display.
- 3. One or more digits in the display are not on when they should be.
- 4. Display does not count down or up with time cooking or clock operation.
- 5. Oven is programmable and cooks normally but no display shows.
- 6. Display obviously jumps in time while counting down.
- 7. Display counts down noticeably too fast while cooking.
- 8. Display does not show the time of day when clear button is touched.
- Oven lamp and turn table motor do not stop although cooking is finished.
 Check if the RELAY(RY6) contacts close and if they are close, replace touch control circuit.

(TROUBLE 8) When "ERROR 2 ERROR 3" come on display.

9. MEASUREMENT AND TEST

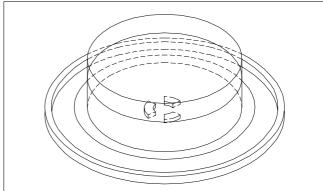

9-1. MEASUREMENT OF THE MICROWAVE POWER OUTPUT

Microwave output power can be checked by indirectly measuring the temperature rise of a certain amount of water exposed to the microwave as directed below.

PROCEDURE

- 1. Microwave power output measurement is made with the microwave oven supplied at rated voltage and operated at its maximum microwave power setting with a load of 1000 ± 5cc of potable water.
- 2. The water is contained in a cylindrical borosilicate glass vessel having a maximum material thickness of 3 mm and an outside diameter of approximately 190 mm.
- 3. The oven and the empty vessel are at ambient temperature prior to the start of the test. The initial temperature of the water is 10 ± 2 °C (50 ± 3.6 °F). If is measured immediately before the water is added to the vessel. After addition of the water to the vessel, the load is immediately placed on the center of the shelf, which is in the lowest normal position.
- 4. Microwave power is switched on.
- Heating time should be exactly A seconds.
 (Refer to table as following)
 Heating time is measured while the microwave generator is operating at full power. The filament heat-up time for magnetron is not included.
- 6. The initial and final temperature of water is selected so that the maximum difference between the ambient and final water temperature is 5K.
- 7. The microwave power output P in watts is calculated from the following formula:

- Δ T is difference between initial and ending temperature.
- t is the heating time.

The power measured should be B (Refer to 2. SPECIFICATIONS) W ± 10.0 %.

CAUTION

- 1. Water load should be measured exactly to 1 liters.
- 2. Input power voltage should be exactly specified voltage (Refer to 2. SPECIFICATIONS).
- 3. Ambient temperature should be $20 \pm 2^{\circ}$ C ($68 \pm 3.6^{\circ}$ F)

* Heating time for power output:

A (second)	70	64	60	56	52	49	47	44	42	40	38
B (W)	600	650	700	750	800	850	900	950	1000	1050	1100

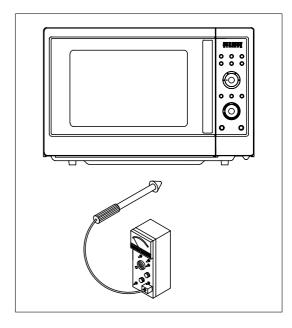

9-2. MICROWAVE RADIATION TEST

WARNING

- 1. Make sure to check the microwave leakage before and after repair of adjustment.
- 2. Always start measuring of an unknown field to assure safety for operating personnel from microwave energy.
- 3. Do not place your hands into any suspected microwave radiation field unless the safe density level is known.
- 4. Care should be taken not to place the eyes in direct line with the source of microwave energy.
- 5. Slowly approach the unit under test until the radiometer reads an appreciable microwave leakage from the unit under the test.

PROCEDURE

- 1. Prepare Microwave Energy Survey Meter, 600cc glass beaker, and glass thermometer 100°C (212°F).
- 2. Pour 275cc \pm 15cc of tap water initially at 20 \pm 5°C (68 \pm 9°F) in the 600 cc glass beaker with an inside diameter of approx. 95 mm(3.5 in.).
- 3. Place it at the center of the tray and set it in a cavity.
- 4. Close the door and operate the oven.
- 5. Measure the leakage by using Microwave Energy Survey Meter with dual ranges, set to 2450MHz.
 - 1) Measured radiation leakage must not exceed the value prescribed below. Leakage for a fully assembled oven with door normally closed must be less than 4mW/Cm².
 - 2) When measuring the leakage, always use the 5 cm (2 in.) space cone with probe. Hold the probe perpendicular to the cabinet and door. Place the space cone of the probe on the
 - door, cabinet, door seem, door viewing screen, the exhaust air vents and the suction air vents.
 - 3) Measuring should be in a counter-clockwise direction at a rate of 1 in./sec. If the leakage of the cabinet door seem is unknown, move the probe more slowly.
 - 4) When measuring near a corner of the door, keep the probe perpendicular to the areas making sure the probe end at the base of the cone does not get closer than 2 in. from any metal. If it does not, erroneous reading may result.

9-3. COMPONENT TEST PROCEDURE

- High voltage is present at the high voltage terminal of the high voltage transformer during any cooking cycle.
- It is neither necessary nor advisable to attempt measurement of the high voltage.
- Before touching any oven components or wiring, always unplug the oven from its power source and discharge the capacitor.

1. High voltage transformer

- 1) Remove connections from the transformer terminals and check continuity.
- 2) Normal readings should be as follows:

Secondary winding ... Approx. 100 Ω ±10%

Filament winding ... Approx. 0.1 Ω

Primary winding ... Approx. 1.4 Ω

2. High voltage capacitor

- 1) Check continuity of capacitor with meter on the highest OHM scale.
- 2) A normal capacitor will show continuity for a short time, and then indicate 10MW once the capacitor charged.
- 3) A shorted capacitor will show continuous continuity.
- 4) An open capacitor will show constant $10M\Omega$.
- 5) Resistance between each terminal and chassis should be infinite.

3. High voltage diode

- 1) Isolate the diode from the circuit by disconnecting the leads.
- 2) With the ohmmeter set on the highest resistance scale measure the resistance across the diode terminals. Reverse the meter leads and again observe the resistance reading. Meter with 500V dc or higher voltage batteries should be used to check the front-back resistance of the diode, otherwise an infinite resistance may be read in both directions. A normal diode's resistance will be infinite in one direction and several hundred $k\Omega$ in the other direction.

4. Magnetron

For complete magnetron diagnosis, refer to "Measurement of the Microwave Output Power." Continuity checks can only indicate and open filament or a shorted magnetron. To diagnose for an open filament or a shorted magnetron,

- 1) Isolate magnetron from the circuit by disconnecting the leads.
- 2) A continuity check across magnetron filament terminals should indicate 0.1 Ω or less.
- 3) A continuity check between each filament terminal and magnetron case should read open.

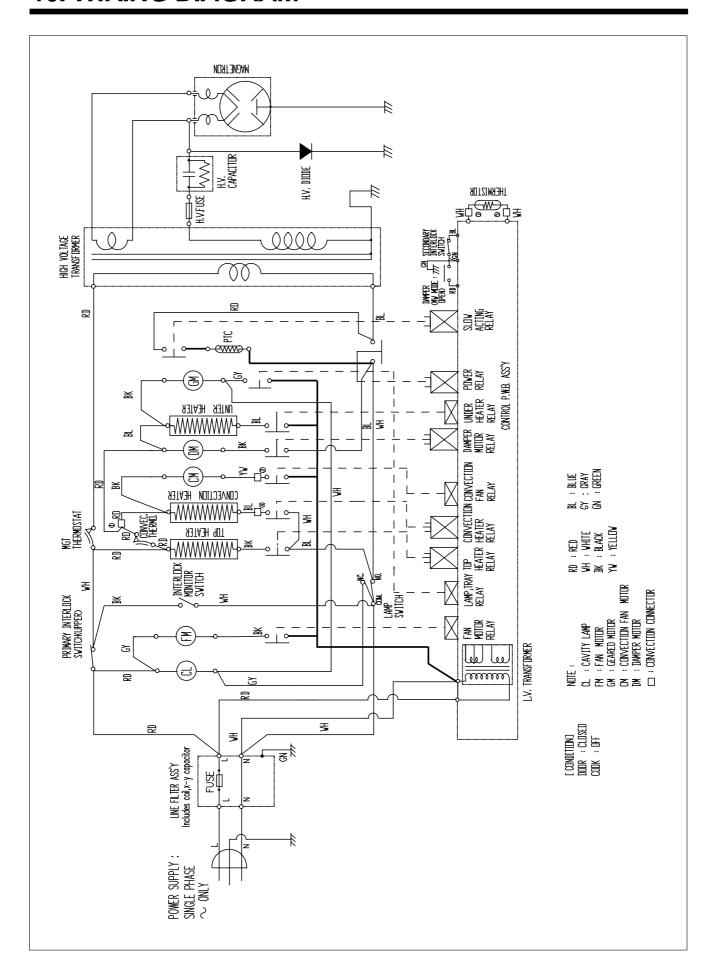

5. Fuse

If the fuse in the primary and monitor switch circuit is blown when the door is opened, check the primary and monitor switch before replacing the blown fuse. In case the fuse is blown by an improper switch operation, replace the defective switch and fuse at the same time. Replace just the fuse if the switches operate normally.

12. PRINTED CIRCUIT BOARD

CIRCUIT CHECK PROCEDURE

1. Low voltage transformer check

The low voltage transformer is located on the P.C.B. Measuring condition: Input voltage: 220~240V / Frequency: 50Hz

Terminal	Voltage(load)	Voltage(no load)
6-7	AC 17.0 V	AC 19.9 V
8-9	AC 1.3 V	AC 1.6 V
9-10	AC 1.3 V	AC 1.6 V

NOTE

- 1. Secondary side voltage of the low voltage transformer changes in proportion to fluctuation of power source voltage.
- 2. The allowable tolerance of the secondary voltage is within \pm 5% of nominal voltage.

2. Voltage Check

- Key check point

NO	CHECK POINT	REMARK
1	IC1 PIN 63, 64	5VDC±5%
2	IC1 PIN 38	5V 0V T : 20 ms(50Hz)
3	IC1 PIN 33 OR 34	5V 0V T : 250 ns(4MHz)

- Check method

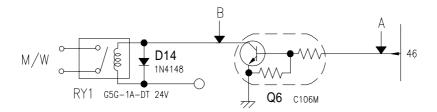

NO	MEASURE POINT	WAVE FORM	REMEDY	REMARK
1	A	DC 5V±5%	Replace ZD2, EC1	NO LOAD
2	В	DC 24V±20%	Replace D23-26, EC4	NO LOAD

NOTE: Each measure point must be measured with GND points.

3. Case of no microwave oscillation

1) When touching M/W button, oven lamp turns on and Fan motor and turntable rotate, and cook indicator in display comes on.

*Cause: **RELAY 1** does not operate.

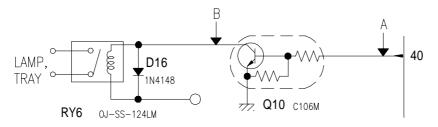

- Check method

STATE	POINT A	POINT B
RELAY 1 ON	+5V DC	GND
RELAY 1 OFF	GND	+24V DC

2) When touching M/W button, oven lamp does not turn on and turntable motor does not rotate but cook indicator in display comes on.

*Cause: **RELAY 6** does not operate.

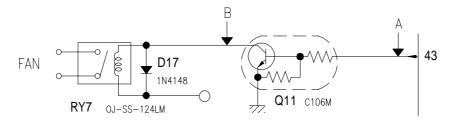

- Check method

STATE	POINT A	POINT B
RELAY 6 ON	+5V DC	GND
RELAY 6 OFF	GND	+24V DC

3) When touching M/W button, oven lamp turns on and fan motor does not rotate but cook indicator in display comes on.

*Cause: **RELAY 7** does not operate.

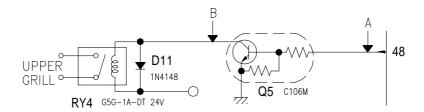

- Check method

STATE	POINT A	POINT B
RELAY 7 ON	+5V DC	GND
RELAY 7 OFF	GND	+24V DC

4. Case of no heating of upper grill

When touching GRILL1 & COMBI button, oven lamp turns on and Fan motor and turntable motor rotate and cook indicator in the display comes on.

*Cause: RELAY 4 does not operate.

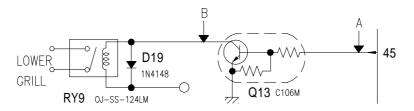

STATE	POINT A	POINT B
RELAY 4 ON	+5V DC	GND
RELAY 4 OFF	GND	+24V DC

5. Case of no heating of lower grill

When touching GRILL2 & COMBI button, oven lamp turns on and Fan motor and turntable motor rotate and cook indicator in display comes on.

*Cause: **RELAY 9** does not operate.

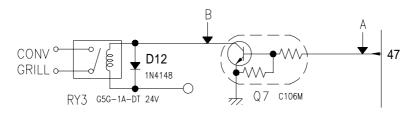

STATE	POINT A	POINT B
RELAY 9 ON	+5V DC	GND
RELAY 9 OFF	GND	+24V DC

6. Case of no heating of convection grill

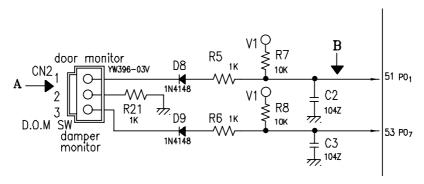

When touching CONVECTION button, oven lamp turns on and Fan motor and turntable motor rotate and cook indicator in the display comes on.

*Cause: RELAY 3 does not operate.

STATE	POINT A	POINT B
RELAY 3 ON	+5V DC	GND
RELAY 3 OFF	GND	+24V DC

7. Case of no stopping of the count down timerWhen the door is opened during operation, the count down timer does not stop.

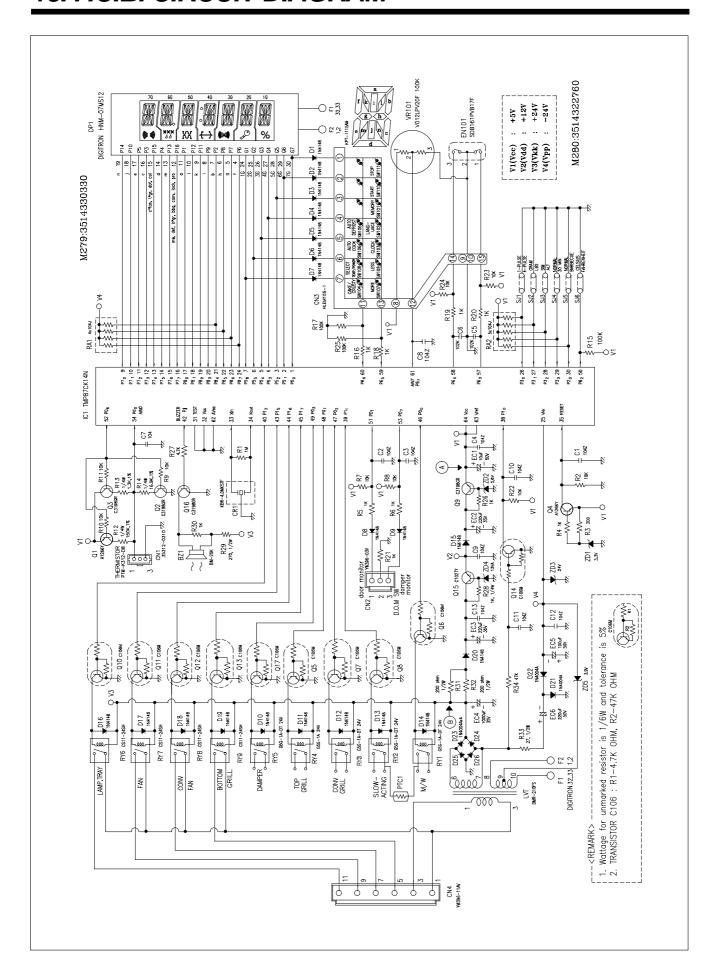

- Check method

POINT	А	В
DOOR OPEN	OPEN	+5V DC
DOOR CLOSED	CLOSE	GND

CHECK NO	METHOD	REMEDY
1	Check the stage(ON,OFF) of the door open	Replace door open monitor swith.
	monitor switch by resistance measurement.
